
Poiwarner Navigon Mn7 -REPACK-

37 Jul 22, 2011 getlocation1 first work in progress for POI Warner A: In the forum: You will need to install the Irish Version of the POI-Warner to get the language functionality. I do not know how the english version works, but the Irish one is the only version I have installed. When I have an Icom IC-767 GPS, it uses the Irish language version. I have used this device for years, and a few months ago, without the POI-warner, the navigon system has started to show some garbled stuff instead of a list of POIs. It was not only shown on the POI-warner. It was also showed on Navigation, Navigation Assist, and a couple of other places. Using the POI-warner as well solved the problem. UPDATE: I tried the English version of the POI-warner, and it will show the list of POI's in both languages, but will only work in the English language version of the POI-warner. The Irish language version of the POI-warner should also work in the English language version of the POI-warner, but I haven't tried. You could buy the Irish language version and try it with the English language version, to see if it will work. Otherwise, you could buy the English language version of the POI-warner and just buy the Irish language version when you need it. The POI-warner uses an internal database of POIs. The included SQLite database is corrupted by the default Microsoft SQLite. This site shows how to repair and re-install the SQLite database. poiwarner and en_AU_POI_Database_Version poiwarner and de_DE_POI_Database_Version To avoid this problem, I created a new database for my POI-warner.
